Career Profile

I have over 3 years of experience in Web Development working with both agencies that targeted a variety of audiences and industries, and individual businesses looking to redefine their image. My current accomplishments include the ramping up the productivity of every department in my current organization by creating a Ticket System for client communication, redesigning and crafting multiple websites and internal tools while making them mobile friendly, and implementing new documentation systems to guarantee a smoother workflow.

My core competencies include HTML, CSS, JavaScript (Vanilla), Vue.js, JQuery, Bootstrap, SQL, Balsamiq, Figma, and Photoshop. With exposure to CMS' such as Magento, ExpressionEngine, CodeIgniter, and Mura, and experience with frameworks such as Laravel, ColdBox, and Framework1.

Things I'm currently in the process of learning are React.js, Node.js, WebGL and Python.

Career Highlights

- Created a ticket system that allowed all of our clients to communicate their needs to our entire team 24/7, rather than needing to consistently email or call one individual for all of their needs. This greatly reduced the amount of time spent by each person responding to, or making a request based on clients needs by taking the issue straight to the developers.
- Crafted a more modern website for an industry-leading company, upgrading their image and improving their reception at national conferences, and improving client satisfaction by making the site mobile friendly.

Professional Experience

RapidCourt Charlotte, NC February 2019 to Present

RapidCourt facilitates the traffic of hundreds of thousands of background check records nationwide. My role is to maintain the systems that control the flow of this traffic, to implement new features, and elevate the look of the company both online and through internal tools.

Junior Full Stack Developer

Maintaining multiple ColdFusion based systems that control the core of our profits, being responsible for the design and development of the website re-brand and internal tools.

- Developed a new client-facing, mobile-friendly website within the first 3 weeks.
 - Created a new communication system to directly connect client issues to developers.
 - Created a new system for documentation and error logs where none was previously in place, greatly strengthening the team's knowledge on dealing with multiple situations, and reducing dependency on individual knowledge.
-

Charlotte CodesIt Charlotte, NC March 2018 to February 2019

Charlotte CodesIt is a small startup based in Charlotte, North Carolina that teaches children in the area the fundamentals of being a web developer. My role here was to teach the Front-End Development portion of the classes.

Front End Development Instructor

Consistently teaching and mentoring multiple children on what it means to be a Front-End Developer, focusing on HTML, CSS, and JavaScript.

E-Dreamz Charlotte, NC January 2016 to February 2018

E-Dreamz is a custom web-based solutions company. My role here was to collaborate with a team of designers and project managers to maintain and develop new websites for various clients under numerous code bases.

Junior Full Stack Developer

Upholding multiple sites under a Custom-Built CMS, Magento, and CodeIgniter, with Laravel as the main framework. Built sites mainly coded in PHP based on PSD design mockups & wireframes.

- Fixed a large-scale error affecting over 90 websites by staying until 11 pm, resolving the issues before any clients were majorly affected.
- Responsible for handling the core upgrades for our custom built CMS and Laravel updates on a pool of over 90 websites.
- Created a new documentation system for all developers improving the onboarding process and reducing dependencies on individual knowledge.
